

How to configure Enterprise Cloud

Note: Before configuring Enterprise Cloud on GajShield, make sure you have Cloud license.

Important: Below configuration can be used in all type of browsing mode. When Transparent Mode or Proxy with No User Authentication is enabled, you will see IP address instead of username in the cloud users list. To check current browsing mode, go to Browsing ◇ Setup ◇ Browsing Options.

1. Go to Organization Information and fill in the details to create CA Certificate.

The screenshot shows the GajShield SecureGate v5 Firewall Management interface. The main window is titled 'Add CA Certificate' and contains a form with the following fields:

Add CA Certificate	
Certificate Name	
Valid Upto	4/12/2011
Key Length	512
Password	
Confirm Password	
Local ID	X.509 DN
Country Name	India
State	
Locality Name	
Organization Name	
Organization Unit Name	
Common Name	
Email Address	

At the bottom of the form is an 'Add' button. The interface also shows a sidebar with navigation options like NETWORK, FIREWALL, USERS, VPN, ENTERPRISE CLOUD, ANTI SPAM, DLP, SYSTEM, ADMIN, REPORT, BROWSING, IPS, and LOGOUT. The top navigation bar includes 'Organization Information', 'Configure Users', and 'Restart Cloud Service'.

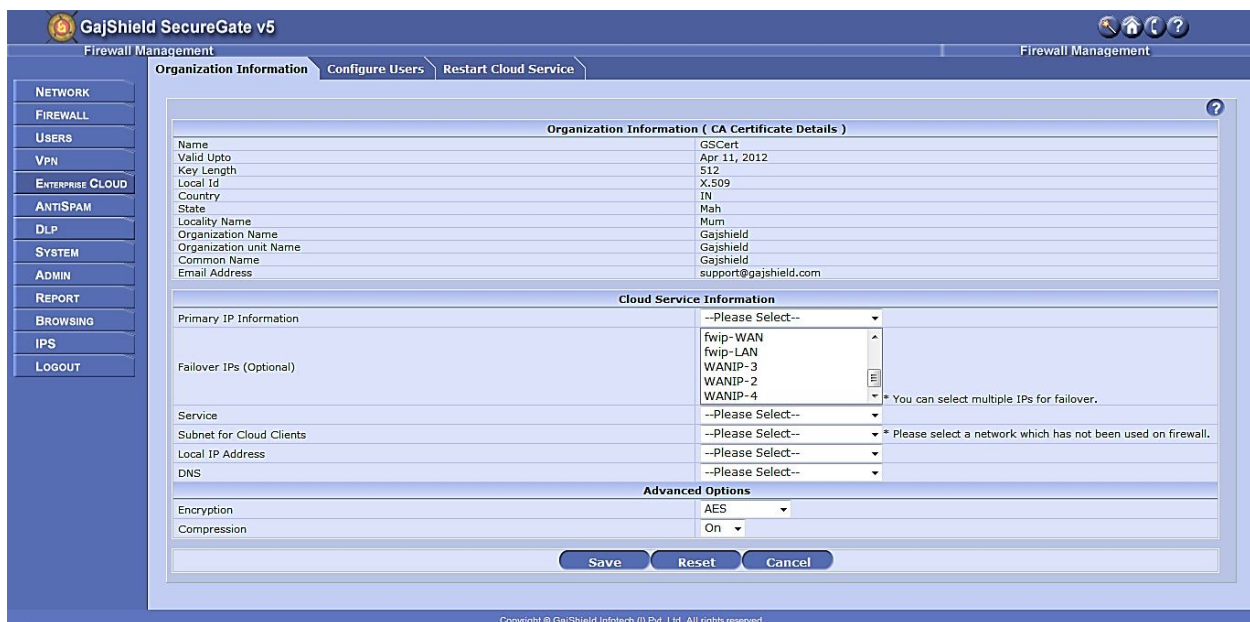

Note: If you find this certificate created beforehand, it is the same certificate created under Browsing ◇ Setup ◇ SSL Certificate used for scanning https browsing traffic.

- **Certificate Name:** A unique name to identify the CA Certificate.
- **Valid upto:** Date till which the CA Certificate is valid, after which the certificate expires.
- **Key Length:** The encryption key size, more the key length, greater the security level & more processing power required.
(Mandatory: Certificate should have key length value set to 1024)
- **Password:** The password/passphrase for the CA Certificate.
- **LocalID:** The Local Identifier for the Certificate helps the firewall to identify the CA Certificate.
 - **FQDN:** The Fully Qualified Domain Name (FQDN), FQDN must be in ASCII format. For example, myhost.test.com.
 - **X.509 DN:** An X.509 certificate binds a name to a public key value. The role of the certificate is to associate a public key with the identity contained in the X.509 certificate.

- **IP Address:** IP address the certificate is associated with. It can be any IP address. For example 125.11.12.13
- **Email:** Email address the certificate is associated with. For example support@gajshield.com
- **Country Name:** Select the country where the firewall is installed.
- **State / Locality Name:** State and Locality are full names, i.e. 'California', 'Los Angeles'.
- **Organization Name:** Full Legal Company or Personal Name, as legally registered.
- **Organizational Unit Name:** In whichever branch of your company the firewall is getting installed. For example Accounting, IT etc.
- **Common Name:** Common name is a mandatory bit of uniquely identifying data, such as FQDN or Personal Name.
- **Email Address:** Insert support email address in case of issues.

Important: If your current certificate expires and you need to create a new certificate, under Browsing ◇ Setup ◇ SSL Certificate after creating the certificate, go to Enterprise Cloud ◇ Organization Information & click on  , without doing any changes in the configuration click on save. After recreating the certificate you will need to delete the old cloud exe under Configuration Users and create new cloud exe.

2. Select Cloud configuration as required, under Cloud Service Information.

The screenshot shows the GajShield SecureGate v5 Firewall Management interface. The left sidebar contains navigation options: NETWORK, FIREWALL, USERS, VPN, ENTERPRISE CLOUD, ANTI SPAM, DLP, SYSTEM, ADMIN, REPORT, BROWSING, IPS, and LOGOUT. The main content area is divided into two tabs: 'Organization Information' and 'Cloud Service Information'. The 'Organization Information' tab is active, displaying a table of details for a CA Certificate. Below this, the 'Cloud Service Information' section contains several dropdown menus for configuration: Primary IP Information (set to '--Please Select--'), Failover IPs (Optional) (a list box containing fwip-WAN, fwip-LAN, WANIP-3, WANIP-2, and WANIP-4), Service (set to '--Please Select--'), Subnet for Cloud Clients (set to '--Please Select--'), Local IP Address (set to '--Please Select--'), and DNS (set to '--Please Select--'). An 'Advanced Options' section at the bottom shows Encryption set to AES and Compression set to On. At the bottom of the form are 'Save', 'Reset', and 'Cancel' buttons.

Organization Information (CA Certificate Details)	
Name	GSCert
Valid Upto	Apr 11, 2012
Key Length	512
Local Id	X.509
Country	IN
State	Mah
Locality Name	Mum
Organization Name	Gajshield
Organization unit Name	Gajshield
Common Name	Gajshield
Email Address	support@gajshield.com

- **Primary IP Information:** First priority will be given to this IP by Cloud client.
- **Failover IPs (Optional):** Select multiple IP's of different ISP for failover. Second priority will be given to failover IP's, when primary IP is not reachable.
- **Service:** Create / select port for the cloud client to link with GajShield, use port number greater than 1024 TCP / UDP.
(Note: UDP ports / services will not work when selecting cloud failover option)

- **Subnet for Cloud Client:** Cloud Clients will use IP address from this Subnet once the clients connect to GajShield
- **Local IP Address:** Cloud Clients would connect to the LAN network through this IP.
- **DNS:** Public or Private IP which can be used by Cloud Clients to resolve dns to browse Internet / intranet.
- **Encryption:** Data is encrypted between the Cloud client and GajShield firewall, using (Blowfish, AES & Triple-DES). Select any one from the drop down list.
- **Compression:** Traffic travelling between the cloud client and GajShield firewall is compressed, when this option is kept ON.

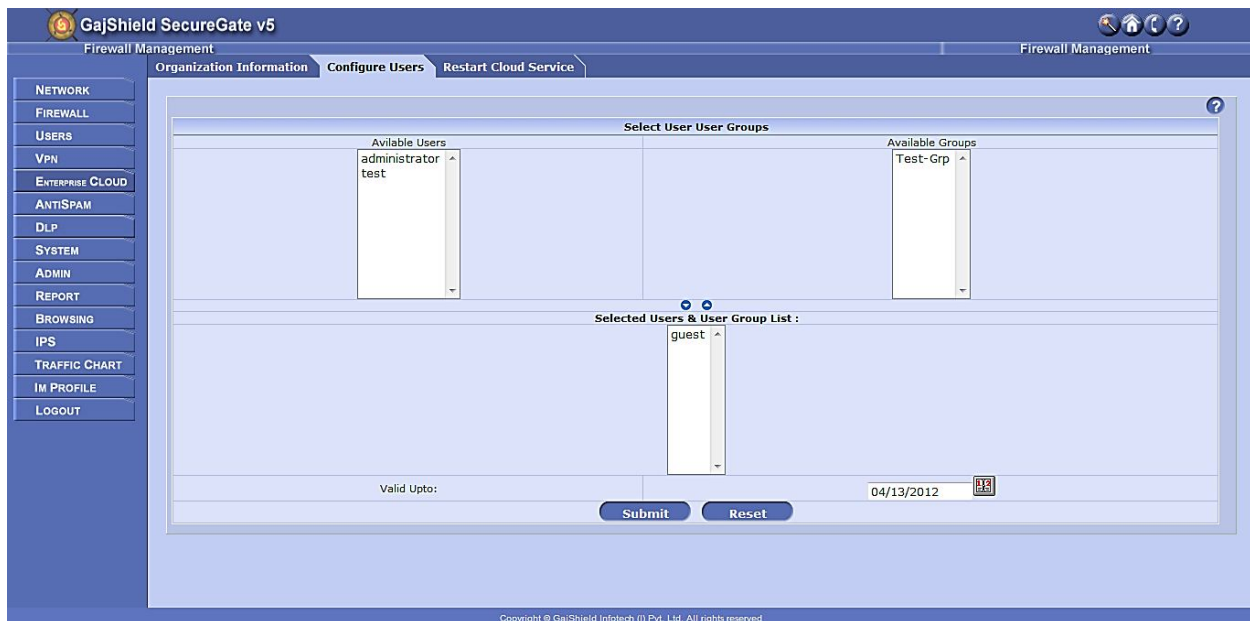

3. Final Cloud configuration will look like the below image.

- To edit the existing Cloudconfiguration click on  , it will allow you to change the Cloud setup.
- Download plan exe without password & user certificate, by clicking on  .

Note: After editing cloud settings, you will have to recreate the cloud exe under Configure Users tab, Restart Cloud Service  and install the same exe on the client PC.

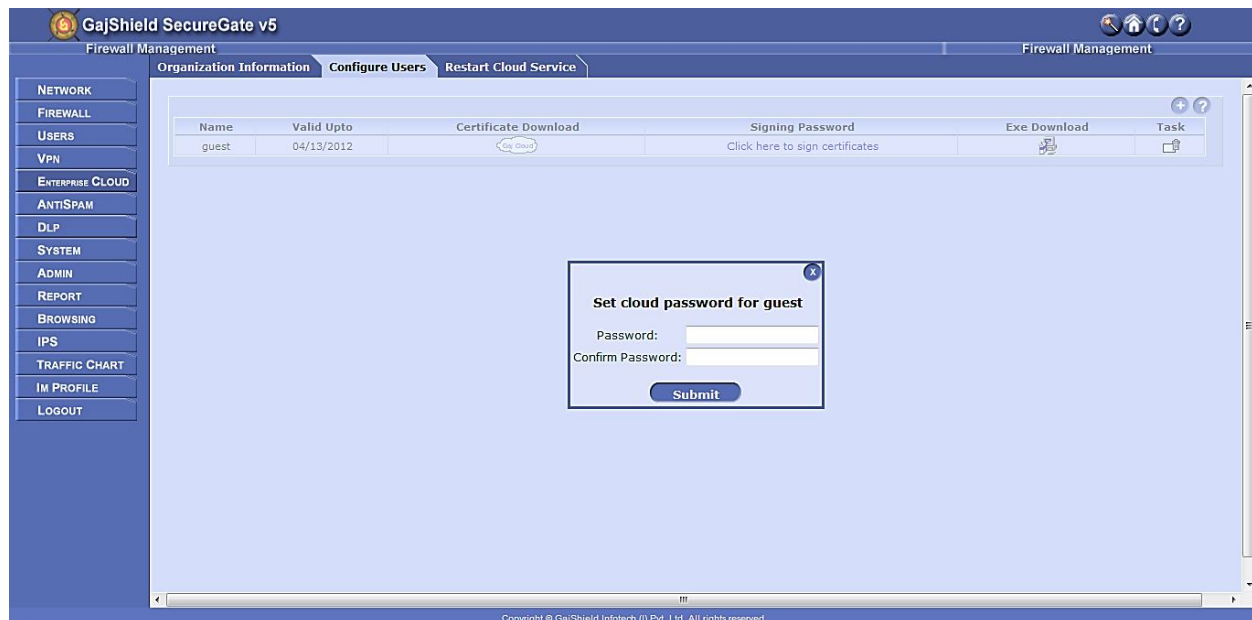

4. Go to Configure Users tab and click on .

- Move users or group by simply selecting them and clicking on  from Available Users or Available Groups tab to Selected Users & Users Group List. To remove user or groups from Selected Users & Users Group List, select the users or group and click on .
- **Valid Upto:** Set expire date by clicking on  for the cloud client, after the said date the cloud client will not be functional.
- Click on Submit button if the entered data is correct or click on Reset to remove the values inserted.

Note: To add new users or group in clouds Available Users or Available Groups list, add them from Browsing  Users Setting.

5. After adding the user to cloud services, sign the exe by clicking on [Click here to sign certificates](#).

- Insert same password in both the boxes and click on submit.

Note: This password can be used to disconnect or uninstall the cloud client.

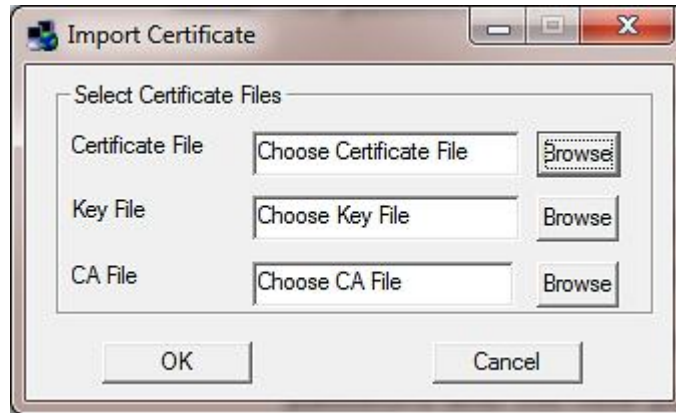

Important: Restart Cloud Service , if you make any changes in Organization Information tab or Configure Users tab.

6. Now you can download the cloud client exe by clicking on . If you want to download only the user certificate click on  save the zip folder containing 3 files. For example (ca.crt, guest-client.crt, guest-client.key)

Important: Install cloud client on normal user login, & use "Run as Administrator" to install cloud client.

7. To change password of the cloud client on users PC, where the cloud client is installed. Right click on cloud icon  shown on the right side of your taskbar. Select Change Password, a pop-up will open insert old password and the new password.

- If you have forgotten the password of the cloud client exe, you will have to re-create the user exe (repeat step 4 & 5) and download the new user certificate from the firewall (see step 6) and not the cloud client exe. Import the 3 files downloaded from the firewall in the respective boxes as shown below.

Certificate downloaded from the firewall for example is guest-client.zip, contains 3 files as show below

- ca.crt
- guest-client.crt
- guest-client.key

Note: Import the above three files in their respective sections.

- Certificate File:** Import "guest-client.crt"
- Key File:** Import "guest-client.key"
- CA File:** Import "ca.crt"

- After configuring enterprise cloud, you will need to add firewall policy to allow mobile users to connect to the firewall. Go to Firewall>Policies>Rules and add policies according to your organizations requirements. Show below is an example of firewall policy for cloud client.

WANto WAN	any	-	1194-TCP	fwip-Wan
CloudConnect to Any	CloudNet	-	http https dnsudp dnstcp	any
