

How to configure Email Settings

Email settings configured on the firewall will send you the followings notifications & alerts.

- ISP link status (UP/Down) (Need No Configuration)
- DLP Rule Alerts (Need Configuration)
- Admin-logs (Need Configuration)
- System Resource Utilization Threshold alert (Need Configuration)
- Mails released from “Spam Detected” & “Mail Archive” (Need Configuration)
- Internet Activity PDF & Upload Reports (Need Configuration)
- IPS Alerts (Need Configuration)

Step 1: - To configure email settings, go to Admin → Settings → Email Settings.

The screenshot displays the GajShield SecureGate v5 Firewall Management interface. The main window is titled 'Configure Email Settings' and contains the following fields and controls:

Field Name	Input Type
To Email-ID (Admin Email-ID)	Text Input
SMTP Server IP	Text Input
From Email-ID	Text Input
SMTP Server Login	Text Input
SMTP Server Password	Text Input
Send Alert-Email for Admin-logs	Checkbox

Below the form are three buttons: 'Test Config', 'Update', and 'Reset'. The interface also features a left-hand navigation menu with categories like NETWORK, FIREWALL, USERS, VPN, ENTERPRISE CLOUD, ANTI SPAM, DLP, SYSTEM, and ADMIN. The ADMIN section is expanded to show sub-options like Administration, Settings, Utility, CMS, and License.

1. **To Email-ID (Admin Email-ID)** - Mention the email address, where the alerts & notifications will be delivered.
2. **SMTP Server IP** - Insert you mail server IP address or you can also mention your MX (mail exchanger) IP address.

Note: - Ensure that email address mentioned in the “To Email-ID” field should belong to SMTP Server IP domain.

3. **From Email-ID** - Mention email ID from which firewall will use to send mails.
4. **SMTP Server Login** - Specify username which will allow mails to be accepted on the mail sever.

5. **SMTP Server Password** - Specify password which is used to authenticate with the mail sever.

Note: - If using MX IP address under "SMTP Server IP", SMTP server login & password not required.

6. **Send Alert-Email for Admin-logs** - This option when selected, firewall will send email alert for any administration activity conducted on firewall WebGUI.

- Once the above steps are complete save the configuration by clicking on update.
- To test your email settings are configured correctly, click on the test config. If you see the following message "A test email has been sent to "user@xyz.com" from user@abc.com, & also receive an email from the mail server, this indicates that email settings are configured correctly. If you see a message different from the above message that means you have not configured the email settings correctly.
- To clear the email configuration from the firewall, click on "Reset".
